

# Headlight Lens Renewal Wipes

## Product details

### Description

#### **Restore headlight clarity in minutes — no tools, no hassle.**

Turtle Wax Headlight Lens Renewal Wipes make it fast and effortless to remove oxidation, haze, and yellowing for instantly clearer, brighter headlights. This simple two-step system uses precision abrasives in the **Renew & Restore** wipe to cut through dullness and reveal a cleaner, clearer lens surface.

Follow with the **Ceramic Acrylic Wipe** to lay down a durable coating that provides long-lasting UV protection, helping prevent future fading and keeping your headlights brighter for longer. No drills, no complicated kits, no mess — just wipe, shine, and go.

#### **Safer night-time visibility starts with crystal-clear headlights.**

### How To Use

1. Wash headlight lens to remove surface dirt. Wear gloves.
2. Remove and unfold Renew & Restore wipe. Wipe the headlight surface with continuous circular or back and forth motion. Use full hand pressure and massage the wipe over the entire surface for 1-2 minutes or until lens clarity intensifies.
3. The wipe will continue to work for up to 5 minutes. Use a clean, dry microfiber towel to wipe off excess residue left behind. Complete this process on both headlights before applying Ceramic Acrylic wipe.
4. Open Ceramic Acrylic wipe and apply quickly over headlight using even back and forth strokes. Let headlights dry about 3 to 5 minutes.
5. Coating will fully cure in 24 hours.
6. Lenses that are cracked, pitted, fogged with water or severely weathered may not return to the original condition.
