# Bar's Power Steering Stop Leak

As vehicles accumulate kilometers, its components begin to wear with age and repetitive use. It is not uncommon for the seals and gaskets of vehicle components to become warped and cracked because of extremes in both temperature and pressure.

## Description:

**Bar's Power Steering Stop Leak** is specially formulated to restore worn seals and gaskets in order to stop power steering fluid leaks and keep seals and gaskets pliable to prevent future leaks.

## Directions:

Add contents of bottle to power steering pump and restore the fluid level to normal operating level. Do not overfill! One bottle will treat up to 1.5 liters of power steering fluid. Typically 320-480 kilometers of driving must be done before leaks will stop. If the leak persists, a second bottle may be required.

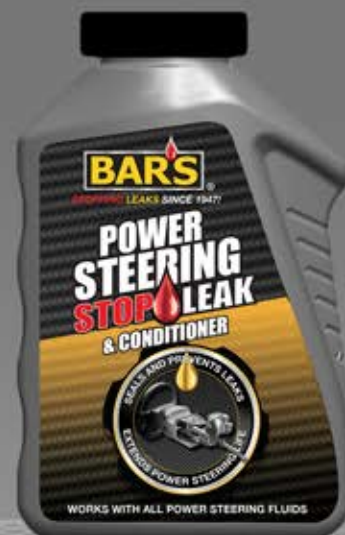

**NOTE:** Mechanical attention may be necessary if leaks continue after treatment.

## Benefits:

- 🔥 Stops power steering leaks
- 🔥 Restores worn seals & gaskets

## Warnings:

The power steering sump should never be overfilled. Check fill level before and after application of **Bar's Power Steering Stop Leak**. Always be careful when working near an engine as engine components can be hot and cause severe burns.

**Power Steering Stop Leak**  
200 mL

## Physical Characteristics:

Physical state: Liquid  
Color: Light Brown  
Odor: Characteristic  
pH: N/A  
Vapor pressure: Not Known  
Vapor density (air = 1): >1  
Solubility: Not Soluble  
Freezing point: Not Known  
Specific gravity: 0.85 g/mL  
Flash point: >100°C
